ABSTRACT

An intercampus summary of reports showing instructional workload and financial resources of academic departments of the State University of New York is presented for fall 1985. Included are statistical tables and graphs, along with a supplement covering trends of selected indicators by discipline for 1975-1985. Information for the 30 campuses is derived from the official Course and Section Analysis system. For specific colleges and categories of colleges, data are provided on cost factors for undergraduate and graduate courses (for all disciplines totaled and for 19 separate disciplines), including: student credit hours, class size, student/faculty ratio, full-time equivalent (FTE) faculty, FTE workload, salary per student credit hour, support costs, and instruction and departmental costs. The percentage distribution of weekly faculty and student contact for each college and college type is indicated for five types of instruction: class, laboratory, tutorial, independent, and programmed. Also covered is the percentage distribution of student credit hours by level of student (lower/upper division undergraduates and beginning/advanced graduate students). For each college, data are included on the total authorized FTE positions, both filled and vacant. Teaching activities that do/do not produce credit hours and state-funded teaching titles are covered. (SW)

STATISTICAL ABSTRACTS

Produced from the Course and Section Analysis System

A. INTRODUCTION

The STATISTICAL ABSTRACTS is an intercampus summary of reports showing the instructional workload and the financial resources of academic departments offering courses during the Fall 1985 semester. These reports use basic formulas developed for the 1976 through 1984 editions. In keeping with the approach established several years ago, another year's worth of information has been added to Reports 5 and 6. Trend data for a full eleven years is now presented. Information has again been aggregated using CASA-modified HEGIS codes, assigned by each campus to individual courses based upon the content of the course.

STATISTICAL ABSTRACTS was produced from State University's official Course and Section Analysis (CASA) system. The 30 campuses participating in the Fall 1985 project initialized their files with Central Administration during the period from early October through February. The system was subsequently updated until the campuses and Central Staff were satisfied with the integrity of the data. The Fall 1985 CASA cycle was brought to official closure in May.

B. CHANGES

Like the last three publications, the official 1985 STATISTICAL ABSTRACTS consists of TWO DOCUMENTS. The first booklet contains the standard array of reports and graphs. The second booklet contains an expanded version of Report 6 along with the newer 6.I report. Report 6.I displays trend information by discipline grouping from Fall 1975 through Fall 1985 with its chief focus being on the individual campus. A separate summary of the change experienced by each individual institution by discipline group is presented with the emphasis on change by broad disciplines for all institutions over an eleven-year period. Variables, including student credit hours, FTE faculty, FTE (student) workload and student/faculty ratios by course level, are displayed for each discipline category. While quite detailed, the expanded report series includes more precise trend data than the rounded percentage information contained in Report 5. In addition, the supplement contains trend information by discipline category for both FTE faculty and FTE (student) workload. This helps avoid the necessity of having to consult multiple editions of the STATISTICAL ABSTRACTS for numeric trend data on FTE faculty and FTE workload for use in modeling, simulations and projections.

As with past editions, the graphs included in these booklets trace trends in FTE workload and FTE faculty from Fall 1975 through the current publication year. The 1985 STATISTICAL ABSTRACTS was prepared in July 1985 and includes support costs calculated from the 1985-86 lapsed accounting file. Support costs calculated by the Office of Institutional Research used data from an April version of the lapsed accounting file which contained the split payroll.

C. OVERVIEW

CASA was conceptualized, developed and implemented for the Fall 1972 cycle and is now a mature project. It is an automated system designed to collect, process and report information on:

- faculty, students, and department workload
- costs of instruction as measured by such factors as credit hours and/or contact hours
- utilization of instructional facilities
- course content and mix
- several other aspects of higher education typically reviewed and analyzed by managers.

Its census date is the end of the third week of classes for full semester courses. While various enhancements have been made over the years, the basic structure of the system dates back to 1972. This continuity facilitates the conduct of trend studies for participating institutions and provides State University an unusual opportunity for institutional and policy research.

Although the capability to develop and process a CASA file for each semester or quarter exists, at the present time only the Fall semester of each year is used in intercampus reports such as the STATISTICAL ABSTRACTS. In Fall 1985, 30 State-operated/funded institutions submitted CASA files. Ten campuses are processing a Spring 1986 file; no campus at this time submits summer data.

CASA was constructed so that its terms and definitions would be generally compatible with the University's enrollment surveys, the Higher Education General Information Survey (HEGIS), and the National Center for Higher Education Management Systems (NCHEMS/WICHE). Application of the guidelines, procedures, definitions and terms of CASA is performed as consistently and uniformly as possible, thus allowing meaningful inter- and intra-campus trend studies as well as selected national comparisons.

The system also helps facilitate the establishment of routine lines of communication among various offices on a campus and also facilitates the linkage of data files including registration, personnel, accounting, facilities and scheduling files. The advantages and benefits of CASA grow each year as we interact with campuses in reviewing and attempting to make the system and its reports more attuned to local information needs. CASA, although structured, is a dynamic system, one which can help satisfy a host of local data requirements.

D. PRODUCTS: STATISTICAL ABSTRACTS

More than 40 comprehensive and detailed production reports are available to campus CASA Coordinators at any time during the CASA cycle. While these are very helpful locally, they are limited for intercampus comparisons. The most important report produced from the CASA system that provides intercampus summary information is the STATISTICAL ABSTRACTS.

Created for the Fall 1976 reporting period, the STATISTICAL ABSTRACTS uses percentage distributions as a style of presentation replacing the earlier reliance on raw data. In general, information is provided with each percentage distribution enabling an analyst with only minor computation to recover the underlying raw data. This design has made the publication useful to administrators interested in profile and summary without resorting to the desk calculator. The STATISTICAL ABSTRACTS also divides information on graduate level instruction into beginning graduate and advanced graduate levels, where former publications reported but a single number.

With the introduction of the STATISTICAL ABSTRACTS, class size replaced section size as a report element describing the number of students in the classroom. Class size is a summary of the sizes of only those sections conducted in lecture, seminar, recitation, and laboratory instructional mode. Other publications included tutorial and other types of non-classroom instruction.

E. REPORT ELEMENTS

A description of the elements included for study in this compilation of reports is contained on this and the following pages:

ACADEMIC RANK: Academic rank is a classification of the instructor of a section. Teaching faculty are designated in accordance with SUNY appointment procedures by the permanent titles they hold, including Full Professor, Associate Professor, Assistant Professor, Instructor, Lecturer, and Teaching Assistant. Additional categories identify personnel paid out of temporary service funds, those who contribute their services, and personnel who have no academic rank (e.g., administrators). Credit hours are recorded for all sections, regardless of whether they are taught by an individual with academic rank or by an individual with another classification.

CAMPUS: Thirty (30) State-operated/funded institutions participated in the CASA project for Fall 1985. This includes the four doctoral level institutions, 12 of the 13 University Collges, 1 of the 4 Health Sciences Centers, 3 of the 4 Specialized Colleges, 4 of the 5 Statutory Colleges -- Ceramics and 3 of the Cornell Colleges, and the 6 Agricultural and Technical Colleges. Given the specialized nature of health-related instruction, Buffalo HSC, Downstate and

Upstate Medical Centers, Optometry and the Veterinary College at Cornell are excluded as is Empire State College because of the special nature of its individualized, contract-specific instruction.

CLASS SIZE: Class size is a summary of the sizes of only those sections conducted in lecture, seminar, recitation, and laboratory mode and represents the ratio of weekly student contact hours to weekly faculty contact hours. Tutorial and other types of non-classroom instruction are excluded.

COURSE LEVEL: The instructional level of a course identifies the level of student at which the course is primarily directed. Four levels are defined: lower, upper, beginning graduate and advanced graduate. An advanced graduate section is defined as a graduate level section in which at least half the enrollment is made up of advanced graduate students. Lower division and upper division instruction continue to be presented separately but this publication, like its predecessors, includes a summary for undergraduate instruction combining lower division and upper division instruction.

CREDIT VALUE (CRV): Credit value refers to the number of credit hours awarded through the course in progress toward a degree, certificate, or other formal award. Certain courses, including physical education, follow special rules for the assignment of credit value.

DISCIPLINE: A discipline is a broad area of knowledge used to group courses into a few categories for general reporting. Each course is assigned to a discipline specialty within the taxonomy cited below. Courses are coded by each institution based upon their content. Thus, discipline code describes the area of knowledge of the course and is not necessarily directly related to the academic unit offering the course, nor the degree program which requires it, nor the background of the students taking the course.

Reference: Huff, Robert A., A Taxonomy of Instructional Programs in Higher Education, U. S. Government Printing Office, Catalog No. HE5.250:50064, Washington, D.C., 1970. The HEGIS codes were expanded by the Central Staff Office of Institutional Research so that SUNY institutions could specifically code the content of courses which otherwise would have to be reported as XX99, Other.

The more than 500 discipline specialities are combined into the following nineteen broad discipline groups specifically serving State University's need for summarization:

Discipline Categories

1. Biological Sciences and Health Professions
2. Business and Management
3. Education

4. Fine and Applied Arts
5. Foreign Languages and Letters
6. Mathematics and Computer Science
7. Physical Sciences and Engineering
8. Psychology
9. Social Sciences
10. Other
11. Agricultural and Natural Science Technologies
12. Business and Commerce Technologies
13. Communication, Printed Media and Design Technologies
14. Data Processing Technologies
15. Education Technologies
16. Foods and Home Economics Related Technologies
17. Health Services and Paramedical Technologies
18. Mechanical Engineering and Agricultural Engineering Technologies
19. Public Service Related Technologies.

Only the first ten categories are used to summarize the activity of the senior institutions. A different grouping of the discipline specialties is used to summarize the activity of the Agricultural and Technical Colleges, necessitating the use of all nineteen categories.

The National Center for Education Statistics (NCES) released a new academic program taxonomy in February 1981: A Classification of Instructional Programs. This taxonomy is more comprehensive than the old HEGIS taxonomy and is more descriptive of the activities of all levels of education. The new taxonomy will be implemented in CASA sometime in the near future for use by the colleges in coding their courses. This project will have long-term implications relative to the computer resources necessary to change our reports, including the STATISTICAL ABSTRACTS.

ENROLLMENT: Enrollment is the number of students in the sections of a course. Anyone registered for credit, regardless of full-time or part-time status, is included. Auditors and post-doctoral enrollees are excluded.

FULL-TIME EQUIVALENT WORKLOAD (FTE WKLD): FTE workload is a unit of measure derived from student credit hours. Generally, one FTE workload is equivalent to 15 student credit hours in undergraduate courses, or 12 student credit hours in graduate courses. Professional and doctoral students are subject to special detailed definitions.

FULL-TIME EQUIVALENT FACULTY (FTE Faculty): Like full-time equivalent workload, FTE faculty is a means of translating an amount of activity into a term that suggests a number of individuals taking part in that activity as if it were their only effort. This concept is particularly useful in allowing several part-time individuals to be equated to an equivalent number of full-time individuals. The full-time or part-time status of faculty is generally defined by contract and for purposes here is extracted from appropriate personnel records. Special procedures exist for imputing an FTE for temporary service faculty, contributed service staff, etc.

INSTRUCTION TYPE: The primary instructional mode of a section is identified and the section is classified from the following: lecture, seminar, recitation, laboratory or other group activity, tutorial, independent study and programmed instruction. A section is classified as using programmed type of instruction if there is generally no instructor expected, scheduled, or present; e.g., television courses, computer-assisted instruction, etc. A section has a single type of instruction but a course may be a composite of several types of instruction. Each time the mode of instruction changes, a new section is assigned to the course even when the same group of students is participating.

SECTION: A section is a group of students assembled for instruction in regularly required meetings wherein the instructional mode is fixed. For example, a group of students meeting on Monday, Wednesday, and Friday for lectures is a single section. A separate section is identified for each different type of instruction even though the same group of students is involved. Therefore, a single group of students meeting Monday and Wednesday for lectures and on Friday for a laboratory constitute two sections. A section is identified as having a single instructional mode. When the instructional mode is tutorial, each student is regarded as a separate section because the instructor meets with individual students separately.

UNIT COST: Four types of unit costs are defined to assist in making cost comparisons for various purposes. The salary unit cost is conveniently thought of as the annual faculty salary divided by the number of credit hours students are awarded toward graduation for participation in the courses taught by this faculty member. The support unit cost generally refers to the remaining departmental expenditures after instructional salaries are removed. Support costs are unitized by the same divisor, i.e., student credit hours. Direct costs for the Instruction and Departmental Research teaching department are obtained from addition of the salary and support unit costs. A fourth type of cost was calculated commencing with the Fall 1980 publication: "Other I&DR Support". Dean's accounts and other Instruction and Departmental Research departments not offering instruction are omitted from all standard CASA cost calculations. Inasmuch as these accounts do support the instructional process, it is appropriate to include their expenditures when examining the different sources of teaching support. These "Other Costs" appear in summary form only for all disciplines and all courses on Report 1.

WEEKLY FACULTY CONTACT HOURS (WFCOH): The weekly faculty contact hours for a staff member are the number of hours in a week the staff member meets with classes in a formal instructional environment or in credit-bearing tutorial sessions.

WEEKLY STUDENT CONTACT HOURS (WSCOH): The weekly student contact hours for a course are the number of hours all students enrolled in the course spend in a formal instructional environment or in credit-bearing tutorial sessions.

F. FORMAT OF REPORTS AND GRAPHS

The statistical displays contained in the TWO BOOKLETS which comprise this publication are intended to be used by top decision makers, support staff, researchers and analysts. In an effort to make the booklets easier to use, the format and order of the reports have been organized as follows:

1.) STATISTICAL ABSTRACTS--The first booklet in this two-part release consists of three major sections.

SECTION I: Overview, Background, Definitions, etc.

SECTION II: Summary Reports.

SECTION III: Detail Reports and Graphs.

Most administrators will probably only occasionally refer to the full detail reports contained in Section III. These provide information required by data analysts and support staff for use in modeling, projecting, etc.

2.) SUPPLEMENT TO STATISTICAL ABSTRACTS--The second booklet is a companion to the first and contains the expanded version of Report 6 and the 6.I report. As previously indicated, while these reports contain much detail, they provide precise numeric information for multiple years on FTE faculty and FTE (student) workload frequently used by analysts and researchers in models and simulations.

To aid all components of the University Community, a series of graphic displays of trend data has again been included. Much information is contained on this series of bar graphs depicting key data. FTE workload and FTE faculty are major indices of instructional effort included in studies and analyses to support the planning/budgeting/evaluating process.

G. DESCRIPTION OF REPORTS

EACH STATISTICAL ABSTRACTS REPORT DISPLAYS AN "ALL INSTITUTIONS" TOTAL.

REPORT 1: Selected Cost Factors by Discipline Category

Effective with the Fall 1980 version of this publication, a new table was added to the Report 1 series. In calculating the support costs of instruction, CASA includes only teaching departments within the Instruction and Departmental Research (I&DR) function. Other I&DR departments not engaged in instruction are omitted from standard cost calculations. These accounts, which typically include dean's accounts and academic equipment replacement accounts, support different teaching departments to varying degrees and should be included in a summary report. By and large, the only I&DR departments excluded from this additional report are summer sessions and accessory instruction accounts.

The full allocation of expenditures from non-teaching academic (I&DR) accounts to the specific departments and courses they support would require very complex algorithms, major revisions to computer programs, and a detailed expenditure file with consistent, uniform sub-accounting procedures and entries. We are not sure the benefits of a new level of detailed reporting would be justified in terms of their costs. Thus, for the foreseeable future, we will include just one additional summary table in the STATISTICAL ABSTRACTS showing the additional I&DR costs for the institution as a whole (all courses, all disciplines).

Inasmuch as CASA is concerned with the instructional workload of SUNY faculty, the amounts expended by various campuses for accessory instruction are not included in the new report. These student credit hours are not generated by our faculty and are not reported by the institutions in CASA. Thus, the expenditures incurred for accessory credits are also excluded. According to the Departmental Allocations booklets, the following amounts were allocated for accessory instruction in fiscal 1985-86 for CASA-participating institutions:

Brockport	$ 17,350
Environmental Science and Forestry	1,139,500
Ceramics	1,239,700
Agriculture and Life Sciences Human Ecology Industrial and Labor Relations	6,642,000
TOTAL	$9,038,550

The remaining portions of the Selected Cost Factors report series arrays the following report elements by discipline category and by course level:

Report Elements

Student Credit Hours (SCRH)
Class Size
Student/Faculty Ratio (S/F)
FTE Faculty
FTE Workload (FTE WKLD)
Salary Per Student Credit Hour (SAL PER SCRH)
Support Costs Per Student Credit Hour (SUPPORT PER SCRH)
Instruction and Departmental Costs Per Student Credit Hour (I&DR PER SCRH)

This report series is displayed in both Section II and Section III of the main STATISTICAL ABSTRACTS booklet. Section II contains only the summary tables. Section III contains the summary tables plus the full detail tables for each of the following 19 discipline categories:

Discipline Categories

1. Biological Sciences and Health Professions
2. Business and Management
3. Education
4. Fine and Applied Arts
5. Foreign Languages and Letters
6. Mathematics and Computer Science
7. Physical Sciences and Engineering
8. Psychology
9. Social Sciences
10. Other
11. Agricultural and Natural Science Technologies
12. Business and Commerce Technologies
13. Communication, Printed Media and Design Technologies
14. Data Processing Technologies
15. Education Technologies
16. Foods and Home Economics Related Technologies
17. Health Services and Paramedical Technologies
18. Mechanical Engineering and Agricultural Engineering Technologies
19. Public Service Related Technologies.

Within the discipline categories are tables for the following levels of instruction and aggregations of levels of instruction:

all courses
undergraduate courses
graduate courses
lower division courses
upper division courses
beginning graduate courses
advanced graduate courses

Report Series "1" has 87 tables, all of which include summaries by institution type followed by individual institution displays. Crosswalks appear on pages 32 and 182-183 to assist the reader who is unfamiliar with the discipline categories, their names and components. A percent column which shows the importance of the discipline's student credit hours to the level of the course is included in each table.

This official publication was produced in May after the SUNY accounting file for fiscal 1985-86 lapsed. While the direct salary costs of instruction in March are the same now as they would be if the publication were produced at a later time, support costs are another matter. They are derived from the accounting file which is continually updated during the fiscal year and subsequent 5 month lapse period. In an effort to estimate how complete the support costs might be from this end-of-March versus mid-September lapse file, data for the 1982 publication were gathered at various points in time and used in various comparisons and statistical tests. Table G.1 on page no. xvi of the 1982 publication outlines the differences in calculating CASA support costs from the March versus mid-September official SUNY lapsed Accounting File. Subsequent to the release of the 1982 publication, additional information from the campuses indicated that any significant change from March to September could be considered a one-time phenomenon due to the changeover to GAAP.

REPORT 2: Faculty and Student Contact Hours by Instruction Type

Report Series "2" exhibits the percentage distribution of weekly faculty and weekly student contact hours (for each institution and institution type) for each of the following types of instruction: class, laboratory, tutorial, independent, and programmed. The percentage distribution of the faculty's contact time is presented on the left under the title "WFCOH", the abbreviation for weekly faculty contact hours. The percentage distribution of the weekly student contact hours is presented on the right under the title "WSCOH", the abbreviation for weekly student contact hours.

This report series follows the same format as Report Series "1" in the use of summary tables and use of detail tables for the 19 discipline categories. The crosswalks on pages 32 and 182-183 should be used with this report series as well.

REPORT 3: Distribution of Student Credit Hours by Course Level and Student Level

The third series of reports displays for each course level the percentage distribution of student credit hours by level of student. Percentage information is displayed with a lead column showing the total number of student credit hours to permit recovery of the underlying raw data if desired. Each table includes a summary for all campuses plus summaries by institution type followed by individual institution displays. Section II contains the following three tables from this report series:

Student Credit Hours for All Courses
Student Credit Hours for Undergraduate Courses
Student Credit Hours for Graduate Courses

Section III contains those three tables plus the following four which provide a more detailed breakdown:

Student Credit Hours for Lower Division Courses
Student Credit Hours for Upper Division Courses
Student Credit Hours for Beginning Graduate Courses
Student Credit Hours for Advanced Graduate Courses

REPORT 4: Personnel Positions - Full-time Equivalents

Several significant revisions were made to Report 4 and were first reflected in the 1983 edition of STATISTICAL ABSTRACTS. Under the "Credit Hour Producing" section, contributed service personnel have been disaggregated from Income Fund Reimbursable (IFR) employees. New categories of information are also available for the "Other Than Credit Hour Producing" cohort in that the "On Leave" and "Vacant" groups are now displayed based upon their I&DR versus non-I&DR source of funds. IFR, Endowed and Other positions not teaching appear separately as a further aid to data analysts in reconciling CASA data with budget information. Although State funds and IFR monies may both be used to hire individuals under personal service-regular or personal service-temporary, the temporary service category in this report pertains to positions funded just by State monies. IFR positions are shown separately and include positions funded by regular and temporary monies.

The report is computer produced and the data are displayed on three pages. While the first two pages contain data for our standard categories of "Credit Hour Producing vs. Other Than Credit Hour Producing", page three displays information for just State-funded teaching titles. Another important point to keep in mind concerns the "Teaching Title" FTE positions for the Health Sciences Centers at Buffalo and Stony Brook. Many such positions default to the "Non-credit Hour Producing" category of Report 4. These instructional positions are teaching but that effort is not reported by the institutions in CASA.

Report 4 is a useful summary in that it displays for each institution the total authorized FTE positions, both filled and vacant, plus the additional FTE personnel resources used in the instructional process. Additional FTE resources include contributed service, IFR staff and temporary service personnel. The report arrays the full-time equivalent (FTE) personnel for each institution into the following three activity groups:

1. CREDIT HOUR PRODUCING ACTIVITIES - the institutional assignment of positions with respect to credit hour producing activities.

2. OTHER THAN CREDIT HOUR PRODUCING ACTIVITIES - the institutional assignment of teaching positions to other than credit hour producing activities.

3. STATE FUNDED TEACHING TITLES - a one page summary of the institutional assignment of teaching title personnel, both I&DR and non-I&DR funded.

Within the CREDIT HOUR PRODUCING ACTIVITIES section, the column labeled NO INSTRUCTOR PRESENT contains full-time equivalent values that were calculated by dividing the FTE (Student) Workload in that category by the Student/Faculty ratio for the institution as a whole. Under the OTHER THAN CREDIT HOUR PRODUCING ACTIVITIES section, the NON-TEACHING TITLES group displays the full-time equivalence of non-instructional staff, with State-funded personal service-regular and temporary plus contributed service accumulated within the same grouping. IFR, Endowed and Other are listed separately and are subdivided into the I&DR versus non-I&DR function.

The final column on the right of page two is the TOTAL OF ALL AUTHORIZED POSITIONS. This column excludes temporary, IFR and contributed service, as well as the calculated NO INSTRUCTOR PRESENT. The TOTAL OF ALL AUTHORIZED

POSITIONS for each institution may be matched against the actual FTE's budgeted to the institution.

Clinical Campus, Health Sciences Center, and E.O.C. FTE positions have been disaggregated from their "core" campuses. As noted earlier, many teaching title FTE at Buffalo and Stony Brook HSC appear under the "Non-credit Hour Producing" section. Although teaching, that workload is not reported in CASA. Report 4 is included in Sections II and III of the main booklet.

REPORT 5: Percent FTE Workload by Discipline Categories and Course Level

This report displays the percentage of FTE (Student) Workload across the same 19 discipline categories as used for Reports 1 and 2. Seven tables are presented which contain percentage distributions by course level and aggregations of course level:

1. Percent FTE Workload by Discipline Categories for All Courses.
2. Percent FTE Workload by Discipline Categories for Undergraduate Courses.
3. Percent FTE Workload by Discipline Categories for Graduate Courses.
4. Percent FTE Workload by Discipline Categories for Lower Division Courses.
5. Percent FTE Workload by Discipline Categories for Upper Division Courses.
6. Percent FTE Workload by Discipline Categories for Beginning Graduate Courses
7. Percent FTE Workload by Discipline Categories for Advanced Graduate Courses.

The observation of trends is facilitated through the display of information for Fall 1975 through Fall 1985. Each table includes a summary for all campuses plus summaries by institution type, followed by individual institution displays.

Report 5 is included in Section III only of the main booklet.

REPORT 6: Trends of Selected Indicators: Fall 1975 through Fall 1985

This report displays basic information for each institution, every institution type and all institutions for Fall 1975 through Fall 1985, thus facilitating the observation of trends over a consecutive eleven year period. The following elements are included in the report:

1. Student Credit Hours (SCRH)

2. Class Size

3. FTE Faculty

4. FTE Workload (FTE WKLD)

5. Student/Faculty Ratios specific to each level of instruction.

As with Report 5, this report is included in Section III only. In an effort to aid campus administrators and data analysts, an expanded version of Report 6 is included in a companion booklet, FALL 1985 STATISTICAL ABSTRACTS SUPPLEMENT. Trend information by discipline category for FTE faculty and FTE (student) workload is presented for the last eleven years. Also included in the SUPPLEMENT is Report 6.I which displays summaries of the change experienced by individual institutions by discipline for an eleven-year period.

H. KEY POINTS

1. CASA officially collects data for just the Fall semester. Expenditures and/or encumbrances for the FISCAL YEAR are applied against credit and contact hours for ONE SEMESTER.

2. Departmental (direct) "Support Costs" reflect the following categories of expense from only departments within the I&DR function that offer credit courses: salaries of filled positions budgeted to the department where the incumbent is not teaching, supplies and expense, temporary service, equipment, recharges, other. Expenses associated with dean's accounts and other I&DR departments that do not offer courses are excluded from standard CASA cost calculations. These additional expenditures are, however, included in the "Full I&DR Costs" table within the Report 1 series of the Fall 1985 STATISTICAL ABSTRACTS.

3. Expenditure data was "frozen" for all departments from the beginning of April lapse SUNY Accounting Master File for fiscal 1985-86. This file contained the "split" payroll.

4. The student/faculty ratios by discipline and level of instruction are used in the planning/budgeting process to model institutional faculty need requirements in the evaluation of prospective budget requests.

5. Courses sponsored through Cornell's School of Industrial and Labor Relations off campus program were not reported to us in CASA.

6. Cornell follows a "strict instructional workload" approach to CASA. Position FTE's, salaries, equipment, etc. for research, public service, extension and other activities are excluded. Funds from all sources (State, Federal, Corporate, etc.) that were expended for statutory instruction have been recorded at the teaching department

level with one exception; there were I&DR expenses within one department of the I&LR School which had no courses attached. Otherwise, there are no remaining I&DR support costs.

7. Stony Brook Health Sciences Center data are shown separately from the core campus. Only Nursing, Allied Health and Social Welfare are included in CASA. Medicine, Dentistry and Basic Health were not reported to us. The other I&DR expenditures from these and related accounts have been excluded from our reports, including the full I&DR costs table.

8. Environmental Science and Forestry data include courses offered during the summer which are an integral part of their Fall program.

9. Fringe benefits are excluded from all cost calculations: direct salary, direct support and other I&DR support.

I. ACKNOWLEDGMENTS

As always, the STATISTICAL ABSTRACTS would not have been possible without the continuous hard work and support of each participating institution. Much perseverance and skill on the part of each campus CASA Coordinator was needed, and for this we are grateful. Also appreciated is the time and effort devoted by staff from other offices:

Central Administration

Budget Office - Dave DeMarco

Computer Center, Operations Section - Billie LaBrie and Dave Green

Programming Unit - Neil Como, Sue Hess and Pierce Mahar

Facilities Management and Support - Vince Murphy and Jim Schwartz

We also thank our typing staff who prepared the final transcript for publication and distributed all copies.

Tommy Annas
Assistant Vice Chancellor

Sally Jack
Project Leader

Brian Spears
Formerly Student Assistant

SECTION II

This section is intended to aid administrators by displaying only the highest aggregations of data. It contains the following:

Figure 1 -- Percent Distribution of FTE Workload and FTE Faculty by Discipline Category, State-operated/funded Institutions, Fall 1975 and Fall 1985

Report 1 -- Selected Cost Factors (for All Disciplines) Including I&DR Costs Summary

Report 2 -- Faculty and Student Contact Hours by Instruction Type (All Disciplines)

Report 3 -- Distribution of Student Credit Hours by Course Level and Student Level

Report 4 -- Personnel Positions - Full-time Equivalents

Full detail reports by the various CASA-modified HEGIS categories may be found in Section III. That section also contains crosswalks of STATISTICAL ABSTRACTS groupings to HEGIS categories as an aid to the data analyst.

[a] Although engaged in instruction, Teaching Title FTEs at Buffalo and Stony Brook HSC default to the "Other Assignment -- Non-credit Hour Producing" category. This occurs because their teaching duties are not reported in CASA.

SECTION III

GRAPHIC DISPLAYS

Trends in Percent Distribution of FTE (Student) Workload and FTE Faculty by Discipline Categories -- Fall 1975 through Fall 1985
